Plummer sphere: sampled radial density against the analytic profile
sampled
Plummer profile
2600
2550
2500
2450
2400
particles in shell (count)
10^0
10^1
shell radius r/a (multiples of the scale radius, dimensionless)
Shells hold equal expected counts, so every point carries the same weight in the chi squared statistic.
